# VOLUME 7 1986

## SUBJECT INDEX

Acetylcholine, 49
  adenylate cyclase
  senescence
Acetylcholinesterase
  age differences, 193
  aging, 215
  basal forebrain, 193
  choline acetyltransferase, 193
  learning rate, 215
  quantitative histochemistry, 215
  sex differences, 193
Adaptation, 199
  age differences
  behavioral and physiological parameters
  chronic hypoxia
Adenylate cyclase
  acetylcholine, 49
  aging, 357
  dopamine receptor subtypes, 357
  senescence, 49
Adrenocortical axis, 331
  age differences
  feedback inhibition, delayed
  feedback inhibition, fast
Age differences
  acetylcholinesterase, 193
  adaptation, 199
  adrenocortical axis, 331
  Alzheimer's disease, 205, 211
  aromatase activity, 121
  basal forebrain, 193
  behavioral and physiological parameters, 199
  benzodiazepine receptor binding, 363
  blood choline homeostasis, 205
  catecholamine-serotonin balance, 9
  cats, 277
  choline acetyltransferase, 193
  choline uptake, 205
  chronic hypoxia, 199
  circadian rhythms, 97, 153
  conditioned taste aversion, 153
  core body temperature, 97
  corticosterone level, 153
  day-night rhythms, 179
  demented vs. non-demented patients, 297
  dihydrotestosterone, 127
  estradiol, 127
  feedback inhibition, delayed, 331
  feedback inhibition, fast, 331
  feeding behavior, 179
  GABA modulation, 363
  gonadal hormones, 165
  HLA-A2, 211
  human studies, 205, 211
  human studies, males, 97
  hypothalamus, 121
  immunocytochemistry, 45
  locus ceruleus, 297
  luteinizing hormone-releasing hormone, 45
  monkeys, 173
  morphology, 277
  N-allynormetazocine, 179
  neuronal counts, 297
  pituitary-adrenal system, 153
  proceptivity, 165
  receptivity, 165
  sex differences, 193, 211
  sexual behavior, 173
  sexual behavior, old male rats, 127
  spiny neurons, 277
  $^3$H-spiperone binding, 265
  striatal D-2 receptor changes, 265
  testosterone, 121, 137
  vaginal cycles, 9
Aging
  acetylcholinesterase, 215
  adenylate cyclase, 357
  Alzheimer's disease, 3
  biochemical changes, 115
  brain glucose, 23
  brain ischemia, 23
  calpain activity, 255
  cerebral cortex, 23
  chiroptera, 255
  cortex, 101
  degeneration, 255
  dendrites, 101
  dendritic networks, 241
  dopamine receptor subtypes, 357
  dopamine release, 77
  energy metabolism, 23
  fish, 17
  forebrain, 17
  human studies, 3
  $^3$H-imipramine binding, 83
  in vivo electrochemistry, 77
  jump thresholds, 185
  learning rate, 215
  locomotor activity, 31, 37
  luteinizing hormone-releasing hormone, 259
  macaques, 259
  morphine analgesia, 185
  morphine hyperthermia, 185
  passive avoidance retention, 115
  phosphatidylserine, 115
  pituitary, 17
  prolactin, 37
  Purkinje neurons, 241
  qualitative analysis, 241
  quantitative histochemistry, 215
  rotational behavior, 31
  senile dementia, 3
  serotonin, 3, 17, 83
  spontaneous alternation, 115
  striatum, 77
  supersensitivity, 31, 37
  tail flick, 185
Aging brain, 337
  comparative-evolutionary model
  lipids
Alcohol, 347
  chronic consumption
  hippocampus
  lipofuscin deposition
  premature nerve cell aging
Aluminosilicates (zeolites), 561
  Alzheimer's disease
  hypothesis review
  olfactory epithelium
Aluminum, 525
  Alzheimer's disease
  amyloid cores
  cell nucleus
  cerebral ferritan
  genetic barriers
  neurofibrillary tangles
  protein moieties
  senile plaques
Alzheimer type dementia, 41
  colchicine
  human studies
  microtubules
  philothermal response
Alzheimer's disease
  age differences, 205, 211
  aging, 3
  aluminosilicates (zeolites), 561
  aluminum, 525
  amyloid, 367
  amyloid cores, 525
  antemortem markers, 367
  blood-brain barrier, 489
  blood choline homeostasis, 205
  capillary density, 321
  cell nucleus, 525
  cerebral cortical microvasculature, 321
  cerebral ferritan, 525
  choline uptake, 205
  cognition, 269
  CSF studies, 367
  desamino-D-arginine-vasopressin, 301
  drug interactions, 269
  electrophysiology, 367
  genetic barriers, 525
  genetic etiology, 459
  Hamilton depression scale, 301
  HLA-A2, 211
  human brain studies, 321
  human studies, 3, 205, 211
  hypothesis review, 561
  imaging, 367
  implications review, 459
  left-handedness, 161
  lesions, electrolytic, 287
  lesions, ibotenic acid, 287
  lesions, medial septum, 287
  lesions, nucleus basalis magnocellularis, 287
  memory deficits, 287
  molecular basis, 459
  molecular genetics, 367
  nerve cell loss, 489
  neuroendocrine markers, 367
  neurofibrillary tangles, 489, 525
  olfactory epithelium, 561
  pathogenesis and progression, 489
  peripheral blood elements, 367
  phosphatidylcholine, 269
  piracetam, 269
  protein moieties, 525
  quinolinic acid, 249
  senile dementia, 3, 249
  senile plaques, 489, 525

serotonin, 3
sex differences, 211
Alzheimer's disease review, 425
amyloid filaments
microtubule-associated proteins
paired helical filaments
Amyloid, 367
Alzheimer's disease
antemortem markers
CSF studies
electrophysiology
imaging
molecular genetics
neuroendocrine markers
peripheral blood elements
Amyloid cores, 525
aluminum
Alzheimer's disease
cell nucleus
cerebral ferritan
genetic barriers
neurofibrillary tangles
protein moieties
senile plaques
Amyloid filaments, 425
Alzheimer's disease review
microtubule-associated proteins
paired helical filaments
Antemortem markers, 367
Alzheimer's disease
amyloid
CSF studies
electrophysiology
imaging
molecular genetics
neuroendocrine markers
peripheral blood elements
Apparatus
Hamilton depression scale, 301
image analyzer, 297
radial maze, 287
Aromatase activity, 121
age differences
hypothalamus
testosterone

Basal forebrain, 193
acetylcholinesterase
age differences
choline acetyltransferase
sex differences
Behavioral and physiological parameters, 199
adaptation
age differences
chronic hypoxia
Benzodiazepine receptor binding, 363
age differences
GABA modulation
Biochemical changes, 115
aging
passive avoidance retention
phosphatidylserine
spontaneous alternation
Blood-brain barrier, 489
Alzheimer's disease
nerve cell loss
neurofibrillary tangles
pathogenesis and progression
senile plaques
Blood choline homeostasis, 205
age differences
Alzheimer's disease
choline uptake
human studies
Brain
Ammon's horn, 347
amygdala, 489
basal forebrain, 193
caudate nucleus, 277
cerebellar cortex, 347
cerebellum, 363
cerebral cortex, 23, 363, 489
corpus striatum, 357
cortex, 3, 101, 215
dorsal hippocampus, 287
dorsal raphe, 9, 489
forebrain, 17
frontal cortex, 249, 287, 321
hippocampus, 215, 249, 331, 347, 363, 489
hypothalamus, 45, 121
locus caeruleus, 489
medial septal nuclei, 215
medial septum, 287
nucleus basalis, 489
nucleus basalis magnocellularis, 249, 287
nucleus locus ceruleus, 297
parietal cortex, 249
pituitary, 17
striatum, 31, 37, 77, 265
subcortex, 489
temporal cortex, 321
ventral globus pallidus, 193
ventral pallidum, 215
ventral raphe, 9
Brain glucose, 23
aging
brain ischemia
cerebral cortex
energy metabolism
Brain ischemia, 23
aging
brain glucose
cerebral cortex
energy metabolism

Calpain activity, 255
aging
chiroptera
degeneration
Capillary density, 321
Alzheimer's disease
cerebral cortical microvasculature
human brain studies
Catecholamine-serotonin balance, 9
age differences
vaginal cycles
Cats, 277
age differences
morphology
spiny neurons
Cell nucleus, 525
aluminum
Alzheimer's disease
amyloid cores
cerebral ferritan
genetic barriers
neurofibrillary tangles
protein moieties
senile plaques
Centrophenoxine, 107
lipofuscin
monkeys
pigment epithelium
retina
Cerebral cortex, 23
aging
brain glucose
brain ischemia
energy metabolism
Cerebral cortical microvasculature, 321
Alzheimer's disease
capillary density
human brain studies
Cerebral ferritan, 525
aluminum
Alzheimer's disease
amyloid cores
cell nucleus
genetic barriers
neurofibrillary tangles
protein moieties
senile plaques
Chiroptera, 255
aging
calpain activity
degeneration
Choline acetyltransferase, 193
acetylcholinesterase
age differences
basal forebrain
sex differences
Choline uptake, 205
age differences
Alzheimer's disease
blood choline homeostasis
human studies
Chronic consumption, 347
alcohol
hippocampus
lipofuscin deposition
premature nerve cell aging
Chronic hypoxia, 199
adaptation
age differences
behavioral and physiological parameters
Circadian rhythms
age differences, 97, 153
conditioned taste aversion, 153
core body temperature, 97
corticosterone level, 153
human studies, males, 97
pituitary-adrenal system, 153
Cognition, 269
Alzheimer's disease
drug interactions
phosphatidylcholine
piracetam
Colchicine, 41
Alzheimer type dementia
human studies
microtubules
philothermal response
Comparative-evolutionary model, 337
aging brain
lipids
Conditioned taste aversion, 153
age differences
circadian rhythms
corticosterone level
pituitary-adrenal system

Core body temperature, 97
age differences
circadian rhythms
human studies, males
Cortex, 101
aging
dendrites
Corticosterone level, 153
age differences
circadian rhythms
conditioned taste aversion
pituitary-adrenal system
CSF studies, 367
Alzheimer's disease
amyloid
antemortem markers
electrophysiology
imaging
molecular genetics
neuroendocrine markers
peripheral blood elements

Day-night rhythms, 179
age differences
feeding behavior
N-allynormetazocine
Degeneration, 255
aging
calpain activity
chiroptera
Demented vs. non-demented patients, 297
age differences
locus ceruleus
neuronal counts
Dendrites, 101
aging
cortex
Dendritic networks, 241
aging
Purkinje neurons
qualitative analysis
Desamino-D-arginine-vasopressin, 301
Alzheimer's disease
Hamilton depression scale
Dihydrotestosterone, 127
age differences
estradiol
sexual behavior, old male rats
Dopamine receptor subtypes, 357
adenylate cyclase
aging
Dopamine release, 77
aging
in vivo electrochemistry
striatum
Drug
acetylcholine, 49
alcohol, 347
amphetamine, 31
Centrophenoxine, 107
colchicine, 41
desipramine, 9
5,7-dihydroxytryptamine, 9
domperidone, 265
dopamine, 31, 49
morphine, 49, 185
N-allynormetazocine, 179
naloxone, 179
phosphatidylcholine, 269
phosphatidylserine, 115
piracetam, 269
quinolinic acid, 249
$^{3}$H-spiperone, 265
zimelidine, 9
Drug interactions, 269
Alzheimer's disease
cognition
phosphatidylcholine
piracetam

Electrophysiology, 367
Alzheimer's disease
amyloid
antemortem markers
CSF studies
imaging
molecular genetics
neuroendocrine markers
peripheral blood elements
Energy metabolism, 23
aging
brain glucose
brain ischemia
cerebral cortex
Estradiol, 127
age differences
dihydrotestosterone
sexual behavior, old male rats
testosterone

Feedback inhibition, delayed, 331
adrenocortical axis
age differences
feedback inhibition, fast
Feedback inhibition, fast, 331
adrenocortical axis
age differences
feedback inhibition, delayed
Feeding behavior, 179
age differences
day-night rhythms
N-allynormetazocine
Fish, 17
aging
forebrain
pituitary
serotonin
Forebrain, 17
aging
fish
pituitary
serotonin

GABA modulation, 363
age differences
benzodiazepine receptor binding
Genetic barriers, 525
aluminum
Alzheimer's disease
amyloid cores
cell nucleus
cerebral ferritan
neurofibrillary tangles
protein moieties
senile plaques
Genetic etiology, 459
Alzheimer's disease
implications review
molecular basis

Gonadal hormones, 165
age differences
proceptivity
receptivity

Hamilton depression scale, 301
Alzheimer's disease
desamino-D-arginine-vasopressin
Hippocampus, 347
alcohol
chronic consumption
lipofuscin deposition
premature nerve cell aging
HLA-A2, 211
age differences
Alzheimer's disease
human studies
sex differences
Hormone
corticosterone, 153, 331
dihydrotestosterone, 127
estradiol, 127
estradiol benzoate, 165
progesterone, 165
prolactin, 31, 37
testosterone, 127
Human brain studies, 321
Alzheimer's disease
capillary density
cerebral cortical microvasculature
Human studies
age differences, 211
aging, 3
Alzheimer type dementia, 41
Alzheimer's disease, 3, 205, 211
blood choline homeostasis, 205
choline uptake, 205
colchicine, 41
HLA-A2, 211
insomnia, 89
microtubules, 41
philothermal response, 41
REM latency, 89
senile dementia, 3
serotonin, 3
sex differences, 211
sleep deprivation, 89
slow wave sleep, 89
Human studies, males, 97
age differences
circadian rhythms
core body temperature
Hypothalamus, 121
age differences
aromatase activity
testosterone
Hypothesis review, 561
aluminosilicates (zeolites)
Alzheimer's disease
olfactory epithelium

Imaging, 367
Alzheimer's disease
amyloid
antemortem markers
CSF studies
electrophysiology
molecular genetics
neuroendocrine markers
peripheral blood elements

$^3$H-Imipramine binding, 83
aging
serotonin
Immunocytochemistry, 45
age differences
luteinizing hormone-releasing hormone
Implications review, 459
Alzheimer's disease
genetic etiology
molecular basis
Insomnia, 89
human studies
REM latency
sleep deprivation
slow wave sleep
In vivo electrochemistry, 77
aging
dopamine release
striatum

Jump thresholds, 185
aging
morphine analgesia
morphine hyperthermia
tail flick

Learning rate, 215
acetylcholinesterase
aging
quantitative histochemistry
Left-handedness, 161
Alzheimer's disease
Lesions, electrolytic, 287
Alzheimer's disease
lesions, ibotenic acid
lesions, medial septum
lesions, nucleus basalis magnocellularis
memory deficits
Lesions, ibotenic acid, 287
Alzheimer's disease
lesions, electrolytic
lesions, medial septum
lesions, nucleus basalis magnocellularis
memory deficits
Lesions, medial septum, 287
Alzheimer's disease
lesions, electrolytic
lesions, ibotenic acid
lesions, nucleus basalis magnocellularis
memory deficits
Lesions, nucleus basalis magnocellularis, 287
Alzheimer's disease
lesions, electrolytic
lesions, ibotenic acid
lesions, medial septum
memory deficits
Lipids, 337
aging brain
comparative-evolutionary model
Lipofuscin, 107
Centrophenoxine
monkeys
pigment epithelium
retina
Lipofuscin deposition, 347
alcohol
chronic consumption
hippocampus
premature nerve cell aging
Locomotor activity
aging, 31, 37
prolactin, 37
rotational behavior, 31
supersensitivity, 31, 37
Locus ceruleus, 297
age differences
demented vs. non-demented patients
neuronal counts
Luteinizing hormone-releasing hormone
age differences, 45
aging, 259
immunocytochemistry, 45
macaques, 259

Macaques, 259
aging
luteinizing hormone-releasing hormone
Memory deficits, 287
Alzheimer's disease
lesions, electrolytic
lesions, ibotenic acid
lesions, medial septum
lesions, nucleus basalis magnocellularis
Method
electron microscopic analysis, 107
high performance liquid chromatography, 77
histochemistry, 193
immunocytochemistry, 45, 259
in vivo electrochemistry, 77
mass spectrometry, 249
morphology, 277
quantitative histochemistry, 215
radiometric assay, 121
Microtubule-associated proteins, 425
Alzheimer's disease review
amyloid filaments
paired helical filaments
Microtubules, 41
Alzheimer's type dementia
colchicine
human studies
philothermal response
Molecular basis, 459
Alzheimer's disease
genetic etiology
implications review
Molecular genetics, 367
Alzheimer's disease
amyloid
antemortem markers
CSF studies
electrophysiology
imaging
neuroendocrine markers
peripheral blood elements
Monkeys
age differences, 173
Centrophenoxine, 107
lipofuscin, 107
pigment epithelium, 107
sexual behavior, 173
Morphine analgesia, 185
aging
jump thresholds
morphine hyperthermia
tail flick
Morphine hyperthermia, 185
aging
jump thresholds
morphine analgesia
tail flick
Morphology, 277
age differences
cats
spiny neurons

N-allynormetazocine, 179
age differences
day-night rhythms
feeding behavior
Nerve cell loss, 489
Alzheimer's disease
blood-brain barrier
neurofibrillary tangles
pathogenesis and progression
senile plaques
Neuroendocrine markers, 367
Alzheimer's disease
amyloid
antemortem markers
CSF studies
electrophysiology
imaging
molecular genetics
peripheral blood elements
Neurofibrillary tangles
aluminum, 525
Alzheimer's disease, 489, 525
amyloid cores, 525
blood-brain barrier, 489
cell nucleus, 525
cerebral ferritan, 525
genetic barriers, 525
nerve cell loss, 489
pathogenesis and progression, 489
protein moieties, 525
senile plaques, 489, 525
Neuronal counts, 297
age differences
demented vs. non-demented patients
locus ceruleus

Olfactory epithelium, 561
aluminosilicates (zeolites)
Alzheimer's disease
hypothesis review

Paired helical filaments, 425
Alzheimer's disease review
amyloid filaments
microtubule-associated proteins
Passive avoidance retention, 115
aging
biochemical changes
phosphatidylserine
spontaneous alternation
Pathogenesis and progression, 489
Alzheimer's disease
blood-brain barrier
nerve cell loss
neurofibrillary tangles
senile plaques
Peptide
desamino-D-arginine-vasopressin, 301

luteinizing hormone-releasing hormone, 45, 259
Peripheral blood elements, 367
Alzheimer's disease
amyloid
antemortem markers
CSF studies
electrophysiology
imaging
molecular genetics
neuroendocrine markers
